## 2. Understanding 6307Z Bearings

### Definition and Specifications of 6307Z Bearings:

6307Z bearings are a type of deep groove ball bearings characterized by their ability to accommodate both radial and axial loads. The designation 6307Z typically indicates a single-row bearing with a shield on one side to protect against contaminants and retain lubrication. These bearings are standardized in their dimensions, with an inner diameter of 35 mm, an outer diameter of 80 mm, and a width of 21 mm, conforming to the ISO 15 standard.

### Explanation of the Role of Bearings in Heavy-duty Machinery:

In heavy-duty machinery, bearings serve as crucial components responsible for supporting rotating shafts and
